＋ summary

I'm a front-end web developer, who loves to experiment with new technologies, collaborate with a wide-range of individuals and groups, and create user-experience focused applications. After working in the public sector for some time, I decided to turn my attentions to front-end web development in order to learn the technologies to make positive and tangible changes in my community. The challenge, collaboration, and impactful nature of technology drives my passion for web development.

＋ education

Turing School of Software and Design
Front-End Software Engineering
Completed individual and pair projects to demonstrate abilities in a range of front-end programming technologies
Started student group focused on UI/UX design, data visualization, and CSS/SASS best practices
